ALL ABOUT EYE TESTS

...because your vision matters

Why are sight tests so important?

Many people think that a sight test is just about checking whether your vision needs correcting with glasses or contact lenses. But there are other important reasons to have regular eye tests.

An eye test is a vital check on the health of the eyes and can detect a range of common eye conditions.

Many of these, if found early, can be treated successfully, avoiding potential sight loss.

An eye test can also spot other health conditions such as high blood pressure, raised cholesterol, diabetes and increased risk of stroke.

Who needs a regular eye test?

Everybody! Sight tests should be part of

everyone's health care routine just like going to the dentist or having a smear test.

And remember, children are never too young to have an eye check. Special tests have been devised to help optometrists examine even the youngest children.

How often should I have an eye test?

Most people should have their eyes checked every two years, unless advised otherwise by their optometrist.

Certain groups may need their eyes checked more frequently. These include: People with a family history of glaucoma, anyone aged over 70, and, diabetics.

Speak to your optometrist for individual advice.

What happens during an eye test?

Eye test appointments usually last 30 to 40 minutes. Your optometrist will tailor the examination according to your individual circumstance, taking into account factors such as your age, medical history and lifestyle.

Tests performed during your eye exam might include: using a retinal camera or ophthalmoscope to examine the retina, blood vessels and nerves at the back of the eye, assessing your visual acuity by asking you to read letters from a Snellen chart and measuring the pressure inside your eye.

How much does an eye test cost?

Costs vary but normally start around £20. However, over 30 million people in

the UK are entitled to free eye tests paid for by the NHS.

And, if you regularly use a computer at work you may be entitled to a test paid for by your employer.

Do I qualify for a free sight test?

Those entitled to a sight test paid for by the NHS include the following groups....

- Aged 60 or over
- Under 16 or under 19 still in full time education
- Diagnosed as having diabetes or glaucoma
- 40 years of age or over with a close relative with glaucoma
- Live in Scotland
- Registered blind or partially sighted
- Complex lenses wearers
